Website Project Guidelines

This week will begin building a website that will become your final project for the course.

Your website project:

1. Will be due the final week of class.
2. **Should be on a topic of your choosing.**
3. Should demonstrate the concepts explored in class.

4. Should include:
   a. 4 - 8 pages or sections.
   b. A main menu that includes navigation to the primary pages or sections of the site.

   c. A responsive, mobile friendly design and mobile friendly functionality.
      i. This means that you site design and content should resize appropriately for mobile devices, such as phones and tablets, and it should be easy to use on those devices.

   d. Relevant content.
   e. Multimedia content (images, videos, audio or embedded content).

   f. About page or section describing the purpose of the site, it's content and / or information about the author(s) and/or history/purpose of the site. (You can use the about page that you created in the beginning of the semester).

   g. The website name, logo, title or header on all of its pages.

   h. Style sheets to control the page layout and design elements of the pages within the site.

5. **Can be started from an example.** If you are feeling uncertain about the project, consider starting your site with one of the example websites below. You can customize the color, images and content of the examples to make the site your own.

   a. Get started by customizing an existing project:
      i. **Use one of the Responsive projects from our textbook:**
         1. Exercise 9-1
         2. Exercise 10-1

ii. **Get the code for a template from W3Schools:**
The benefit of doing this is that you can explore something new, with many helpful resources and TryIt demos on the W3 Schools website. They even give you the code to help you get started!

1. [A W3Schools W3.CSS Demo site](#)
2. [A W3Schools W3.CSS Template site](#)
3. [A W3Schools Bootstrap Theme](#)
4. W3Schools Bootstrap Template: [Simply Me](#)
5. W3Schools Bootstrap Template: [Company](#)
6. W3Schools Bootstrap Template: [Band](#)

6. **Should be uploaded to your Delta web-space.** The link to your uploaded project should also be submitted to in eLearning, with a zipped copy of your project files.

7. Should be tested to ensure all elements function as expected.

8. Will take longer than one week to complete.

   a. By the end of this week you may not be meeting all of the requirements listed above, but this version of your site should show your starting point and plan for meeting the requirements of the final version of the project.

   b. You will need to continue working on the project each week with the goal of wrapping it up by the final week of class.

Submission Instructions

1. **This week, submit the items below to this dropbox in eLearning:**
   a. A link to your project on your Delta webspace.
   b. A zipped copy of your project files.
   c. A list of goals and "To do" items for the final version of the site.
